

Plastic Pollution - Duck In Danger

Done by: Juwairiyah Syed and Zainab Syeda

Al-Madinah School, Mangere, Auckland

Photo story-

Photo of ducks with lots of plastic around them in their nesting area.

Pictures taken by: Juwairiyah Syed at Owairaka park-

- This picture is of a duck in a public park with plastic, which is very deadly for these animals because they can easily tangle and die when they struggle a lot and the plastic starts to wrap around them even more tightly. The plastic gets blown into the pond where ducks or other animals try to eat it.

-All this rubbish is caused by us people.

-Everyone should try to use reusable bags and try not to use too much plastic. Students, kids and adults should start picking up their rubbish at other places or they can even help by picking up rubbish in their nearby park. It is not only deadly for animals but also for us humans. There should be more rubbish bins in places like the park and beaches.

-We should stop polluting to help save our environment and the animals!;

-We should try and save our planet by recycling, sustaining and reusing plastic and any other things we could reuse. Our environment should be eco-friendly.
